Summary

I am a Software Engineer with experience in lots of modern frontend technologies and web tools such as SASS, LESS, CSS, HTML, Bootstrap, JSON, Webpack, Rest, Angular, React.js, Redux, Ionic, Pug, and Web markup. As a designer amateur, I love working with drawing and sketch tools like Balsamiq, Adobe XD, Adobe Photoshop, and Adobe Illustrator. My main programming languages are javascript and typescript but I will always be pleased to learn new ones in my next jobs.

I love to support the online community because it is a great way to share my knowledge with others. On my GitHub page, there are some repositories of my personal projects and on my NPM page, there are some of my publications.

I love following design patterns for keeping my code cleaner and readable for any person who wants to continue my work. Also, I like to be part of communicative and hardworking teams where anyone can share his point of view on whatever problem needs a solution.

** In my free time, I also love to take shots of landscapes and city views.
